

Come see what all the **BUZZ** is about.

NMIX Capstone Fall 2011 Presents...

GardenBuzz

An iPhone app created for the Atlanta Botanical Garden that allows users to enhance their experience in the Garden and even take a part of that experience home with them. GardenBuzz allows users to scan QR codes near plants around the Garden to learn more about those plants and the pollinators that visit them.

Users can then take that information home with them to create their own pollinator gardens.
